

Decarbonisation strategy of the Port Authority of Valencia

Raúl Cascajo
Head of Environmental Policies

2th April 2022

MEDports
ASSOCIATION

The Algeciras Bay Port Authority & the MEDports association are pleased to invite you at a technical seminar entitled:

GREEN TRANSITION FOR MARITIME TRANSPORT

On April 28th, 2022, in Algeciras

FOR MORE INFORMATION

- Philippe Guillaumet
+ 33 (0)6 11 81 22 83
- M. Luca Lupi

Decarbonisation strategy of the Port Authority of Valencia

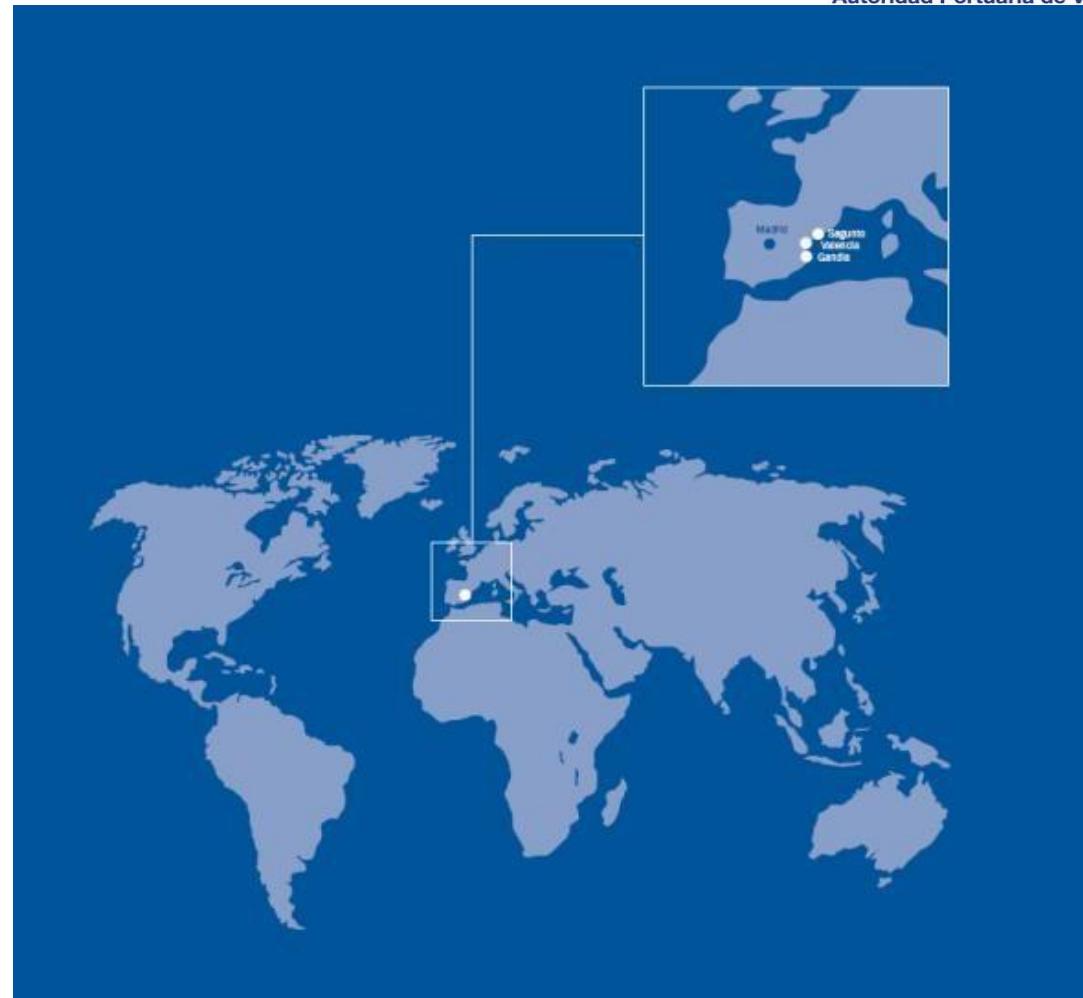

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

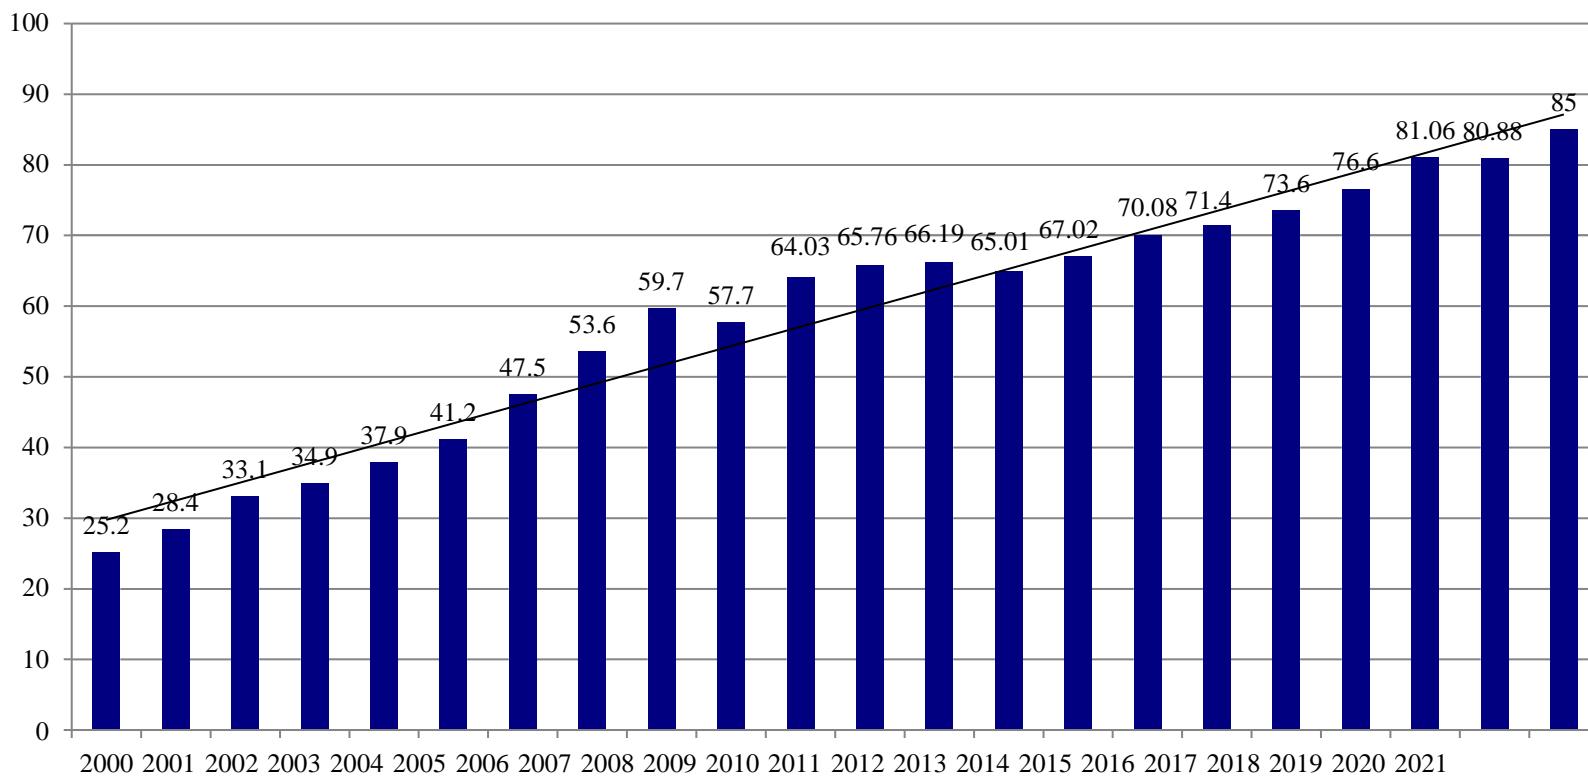

The PAV runs 3 commercial ports in the Valencian Region

The Port Authority of Valencia (PAV) is a State owned public entity in charge of the management of 3 ports located along 80 kilometres of the eastern border of the Spanish Mediterranean coastline in the Valencian Region: namely, the ports of Sagunto, Valencia and Gandia.

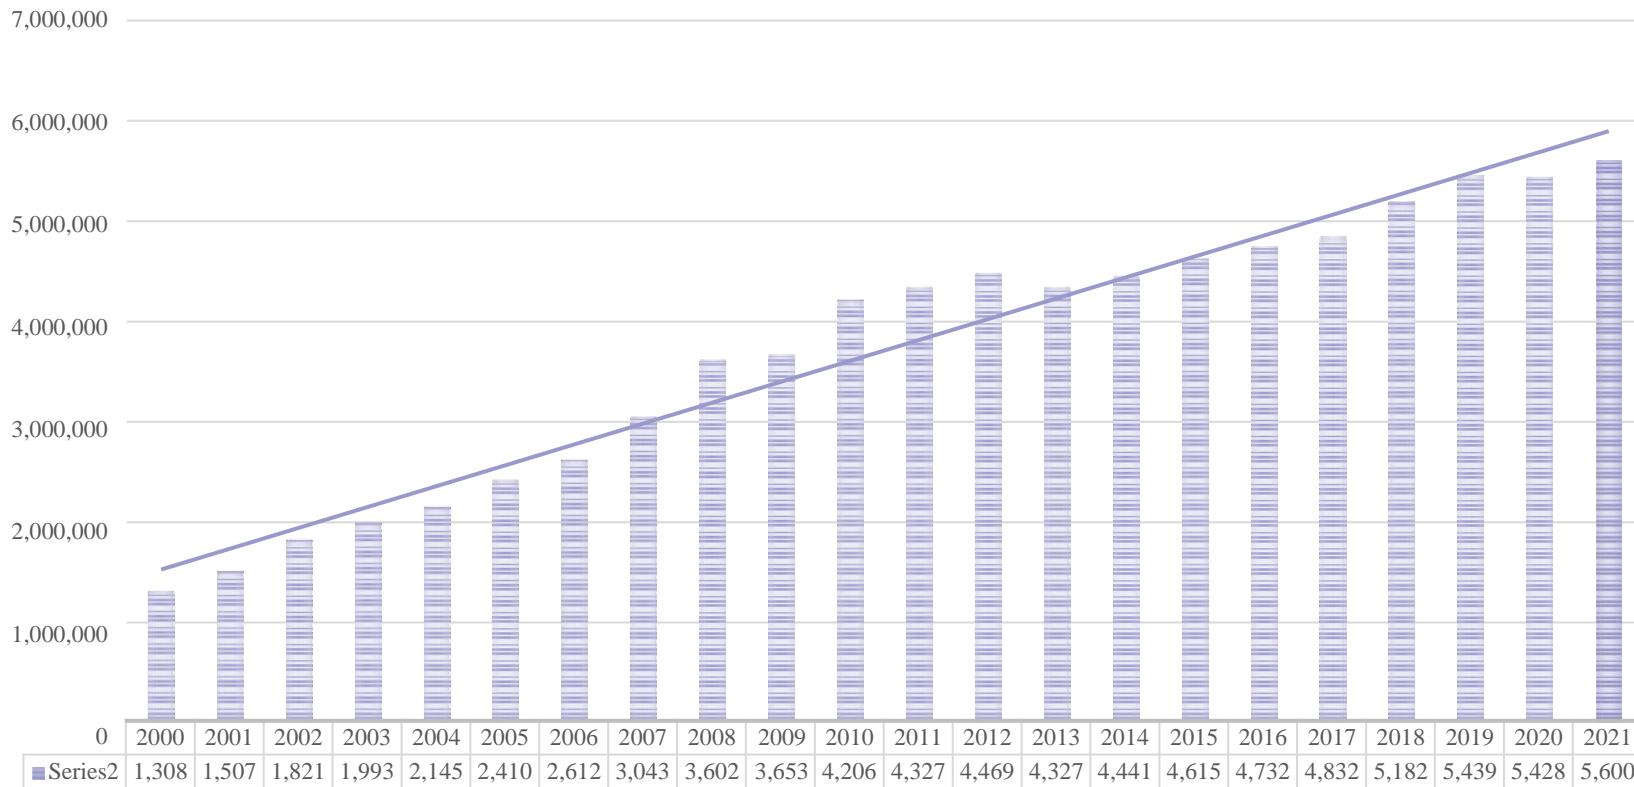

Over 85 million MT handled in 2021...despite Covid 19

PAV CARGO THROUGHPUT - MILLION MT

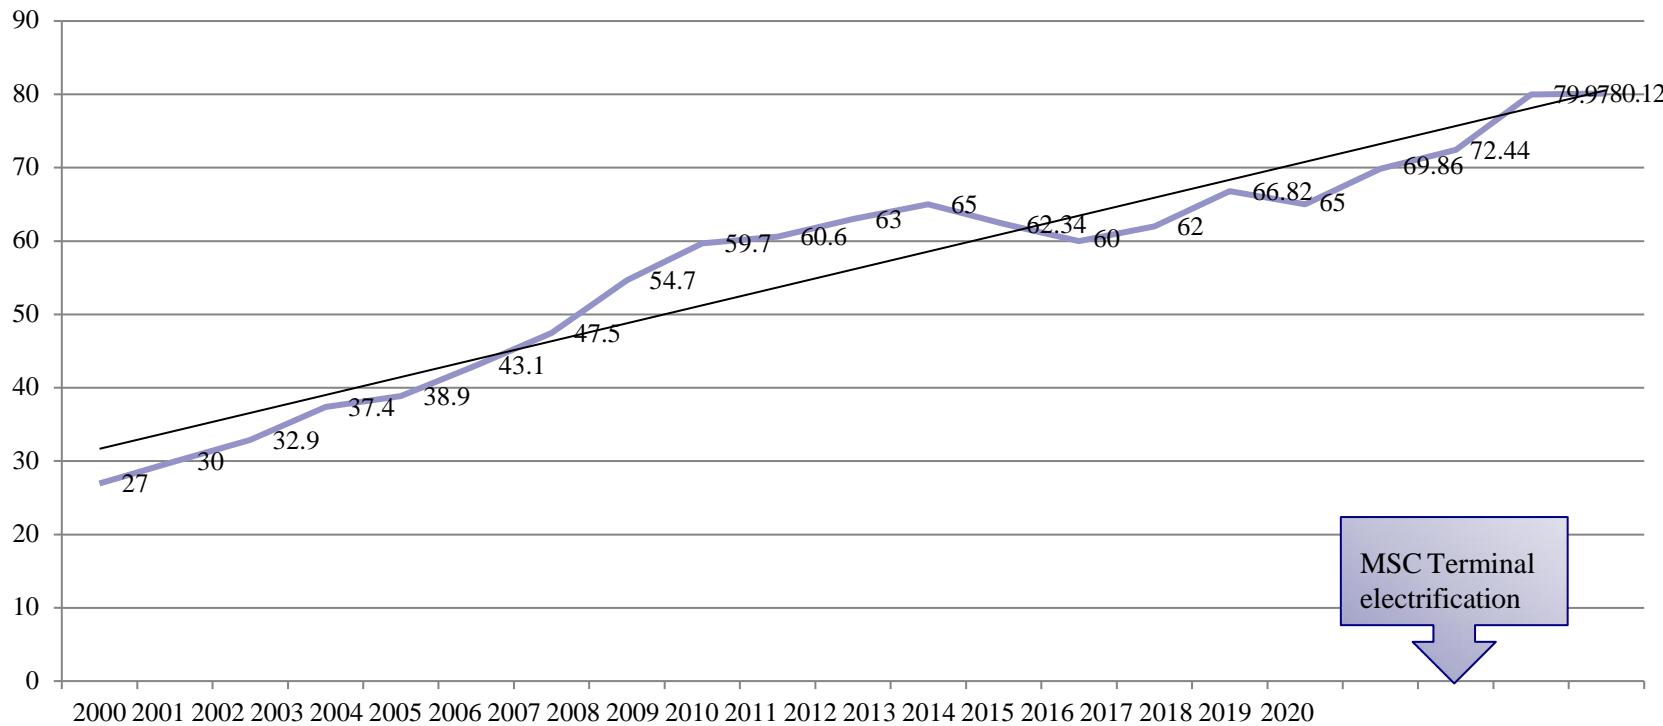

Over 5.6 MTEU in 2021...despite Covid19

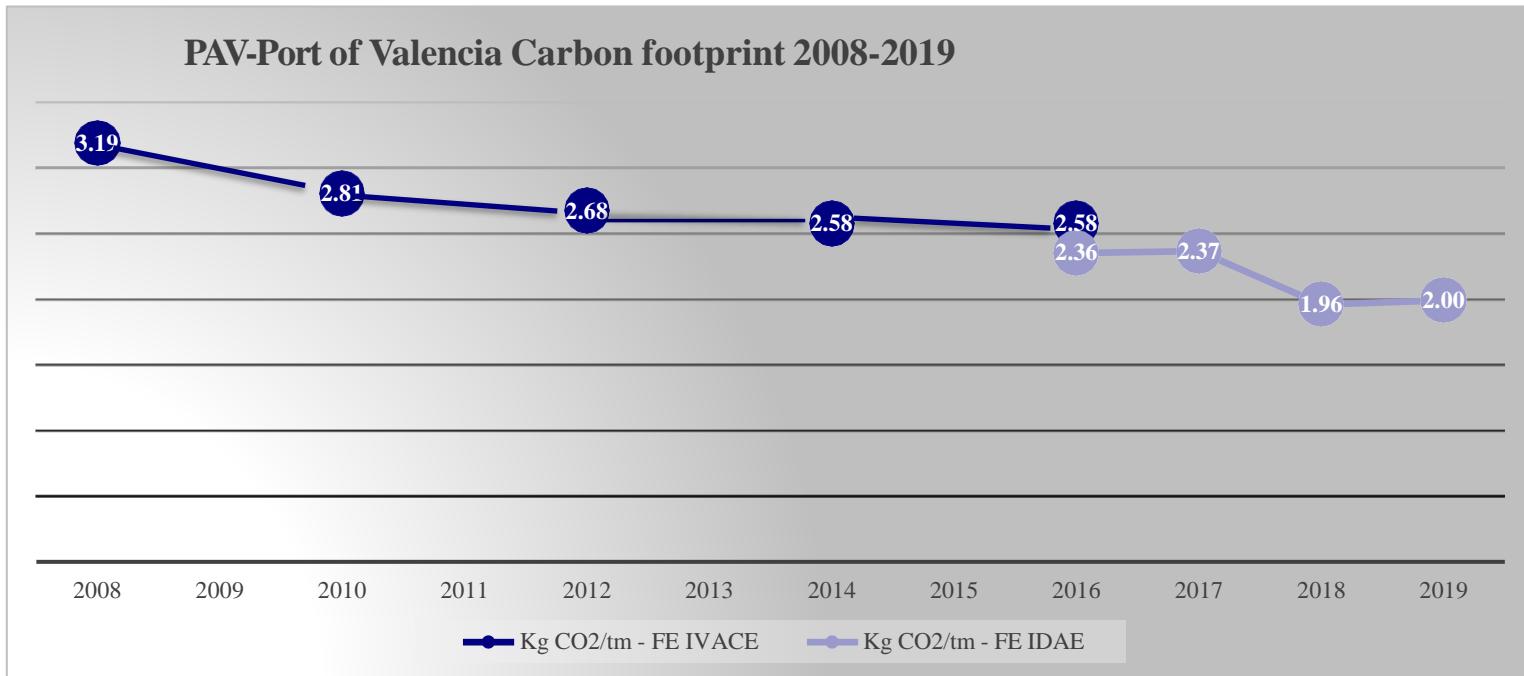

PAV CARGO THROUGHPUT - TEU

PAV electricity consumption - GWh

Carbon footprint calculation and monitoring

Verified by Lloyds under ISO 14064 scheme

Cargo increase 2008-2016 **36 %**
CF indicator decrease 2008-2016 **30 %**

Cargo increase 2016-2019 **15 %**
CF indicator decrease 2008-2018 **37 %**

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

**Around 80 GWh consumed in 2020, (74 GWh Valencia only
... and growing)**

- Electrification
- Port enlargement
- New bunkering services (OPS)

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

Decarbonisation strategy of the Port Authority of Valencia

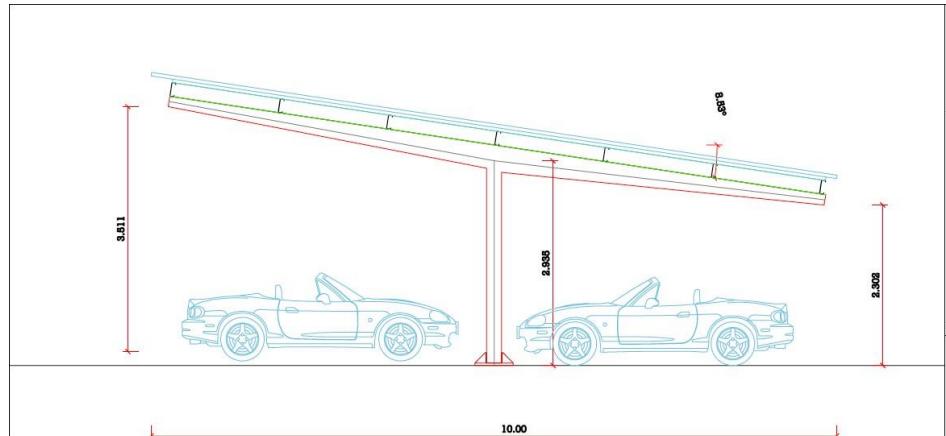

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

PV facilities Port of Valencia

Data:

5,500 kWp rated power

AEP: ≈ 10 GWh/year

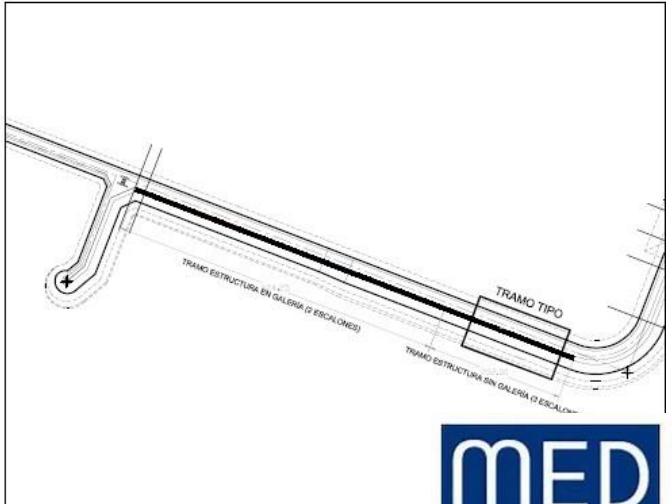

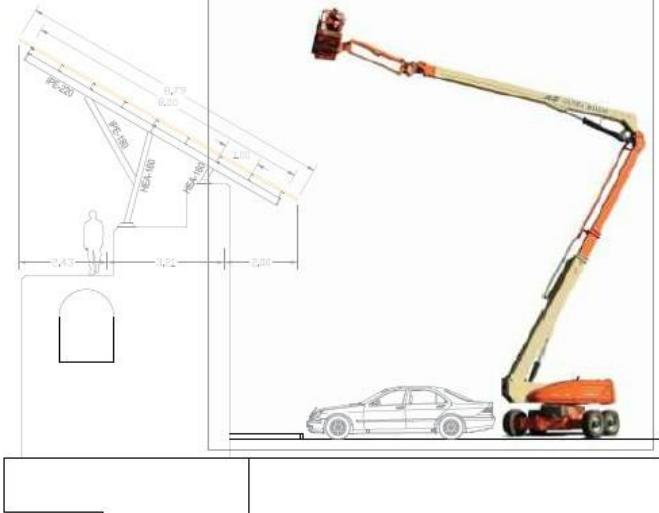

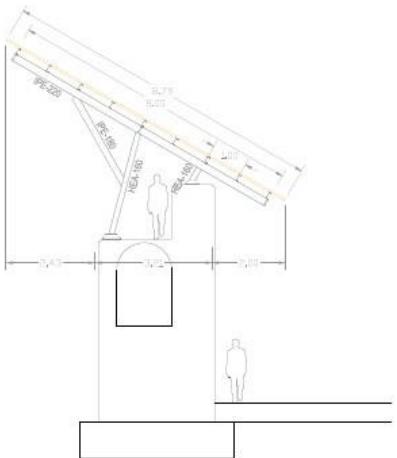

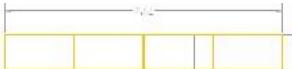

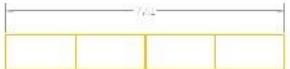

PV facilities Port of Valencia

Data:

1,400 kWp of rated power

AEP: ≈ 2.5 GWh/year

Puerto de Valencia wind farm

Minimum installed capacity of 15 MW

Number of wind turbines: min 3

AEP: 50 GWh/year

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

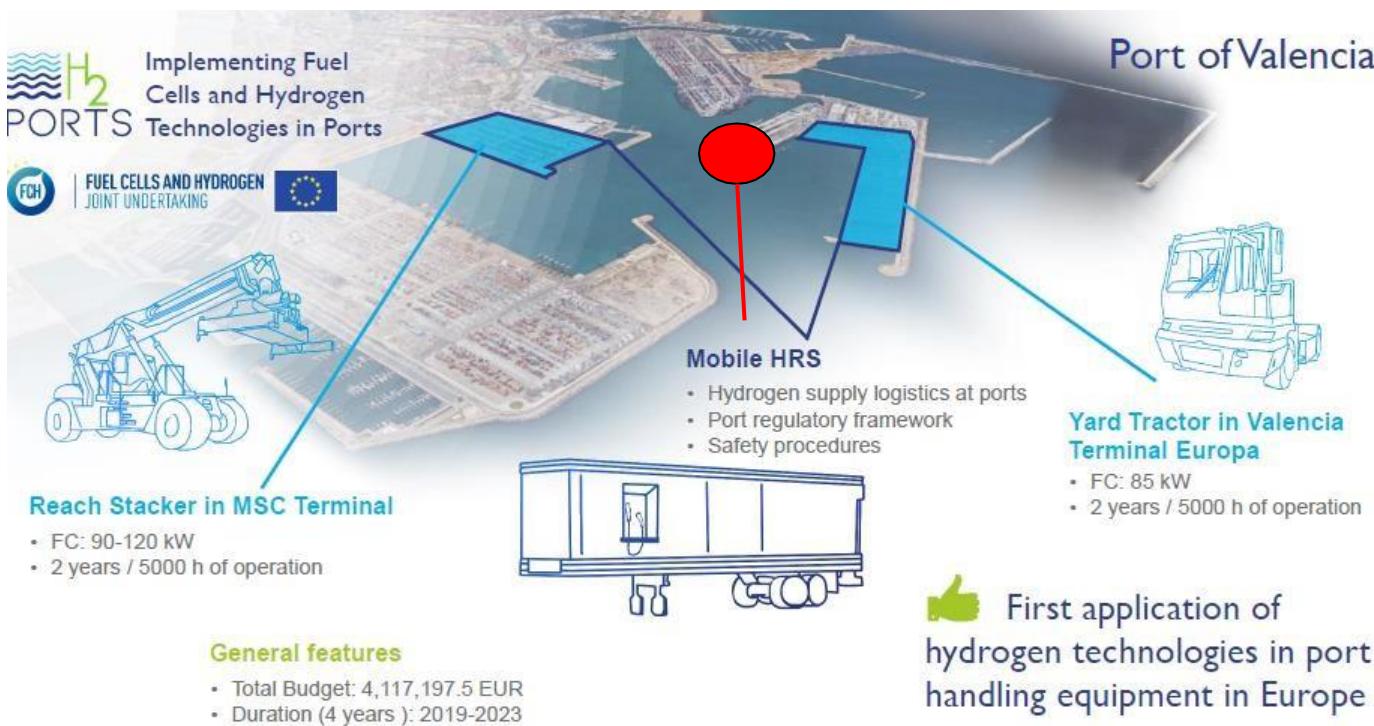

Use of alternative fuels

- LNG for Ro-Pax vessels

Use of alternative fuels

- H2 for port machinery (H2PORTS Project)

OPS facilities

Coverage of 50% of ship calls in the Port of Valencia: In 2030, forecast: 14.5 MW - 23 MW

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

Energy efficiency

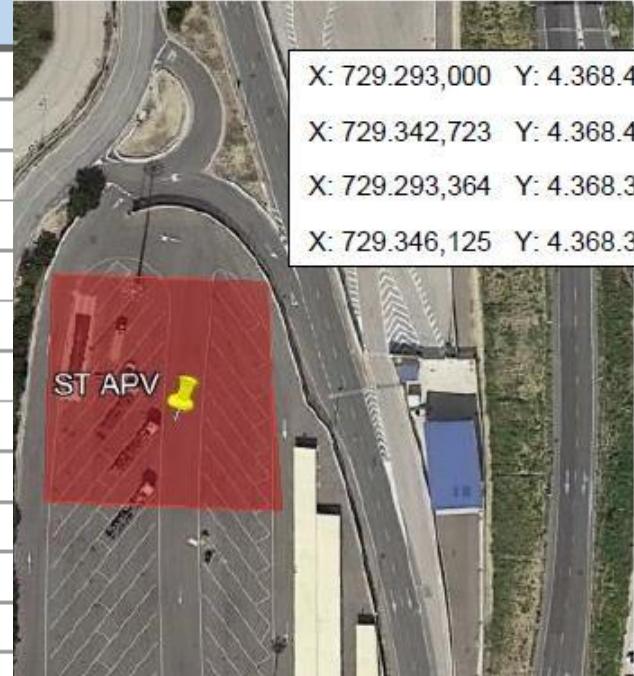

- Substitution of port machinery and car fleets by hybrid and electric
- Enhancing the use of railway
- Electrification of port terminals
- Energy efficiency measures implementation
- Smart grids tools implementation

New Electrical Substation

- Electrical substation in the Port of Valencia for the future OPS

CARACTERÍSTICAS GENERALES	
Sistema	Corriente Alterna Trifásica a 50 Hz
Tensión nominal (kV)	132
Categoría de la línea	Primera
Longitud total (m)	964
Nº de circuitos	2 (Doble circuito enterrado)
Origen	ST La Punta
Final	ST APV
Tipología de la línea	Subterránea
Potencia máxima admisibles (MVA x circuito)	755 A en 132 kV (171.41 MVA)
Potencia requerida (MVA x circuito)	30
Tipo de cable	HEPRZ-AI-1200 mm ² H172 132 KV
Tipo de canalización	Zanja entubada hormigonada
Categoría de la red	A

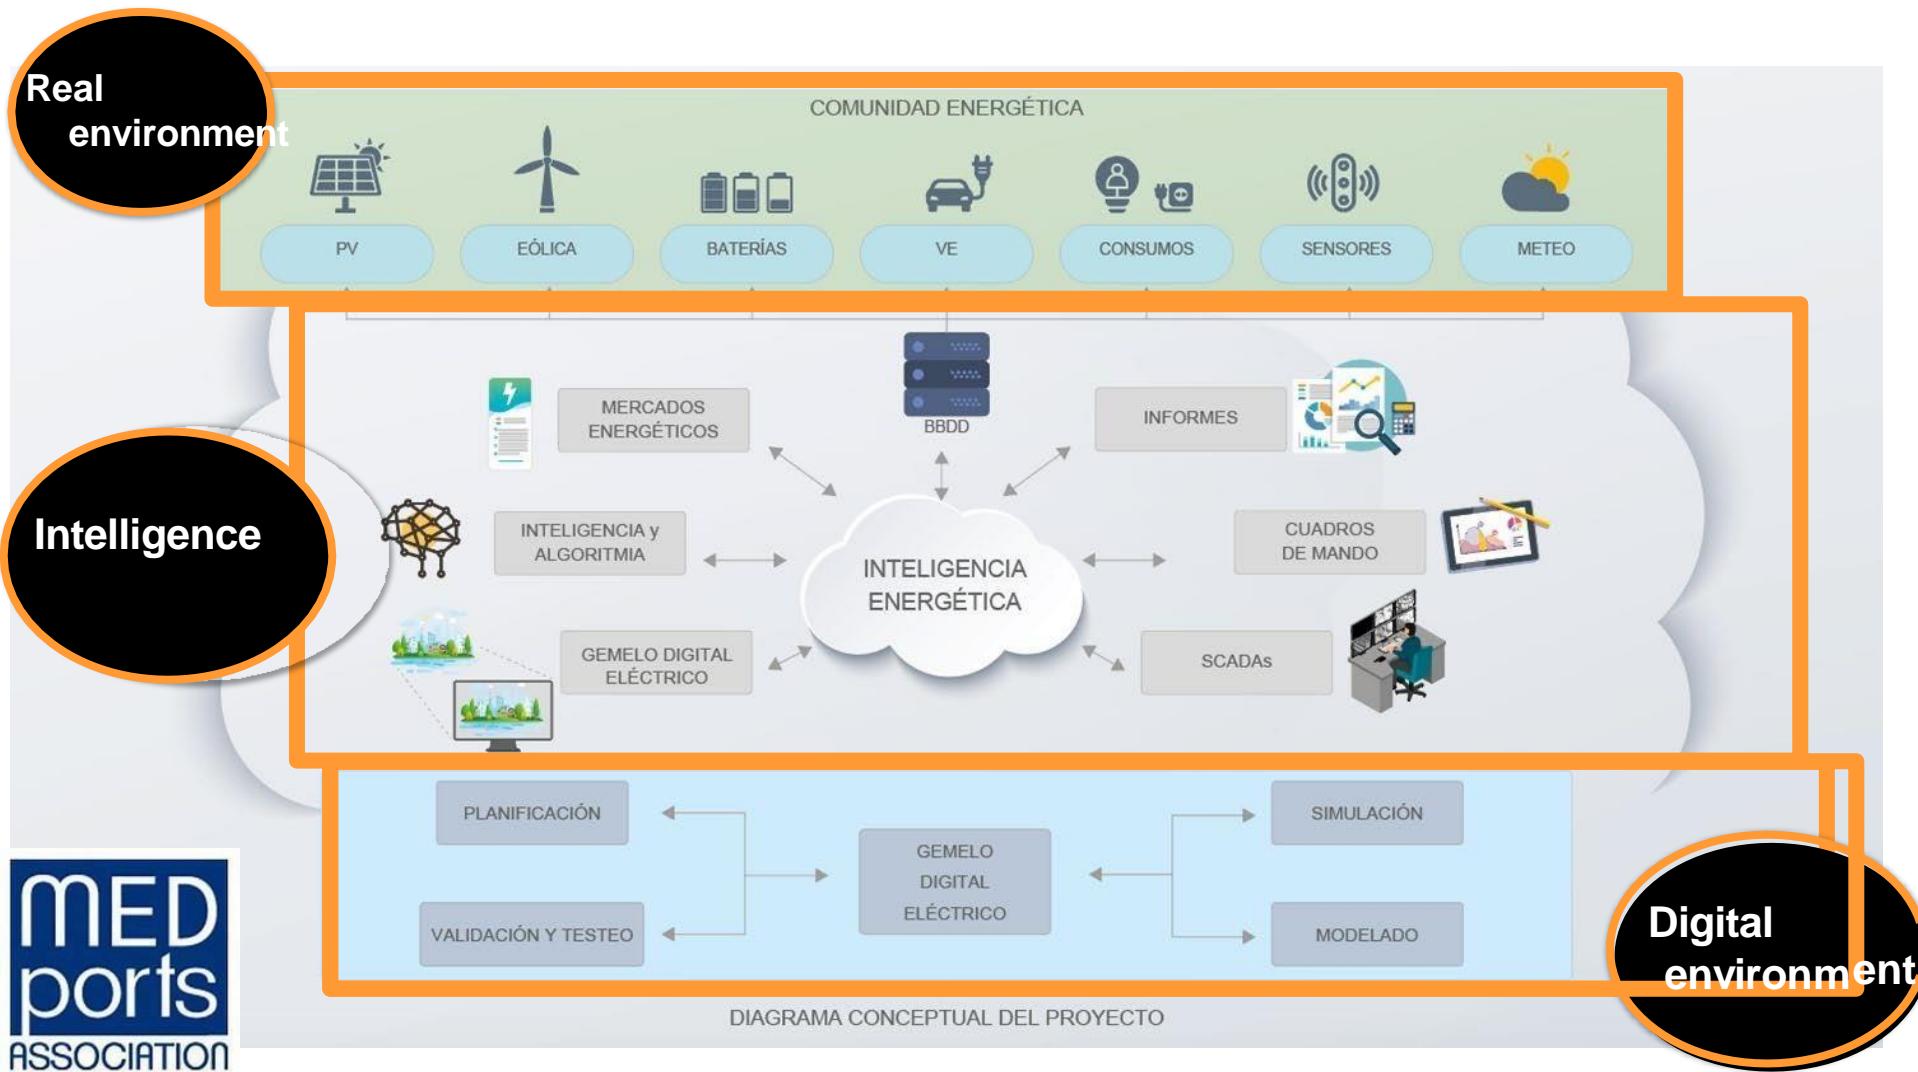

X: 729.293,000 Y: 4.368.411,72
 X: 729.342,723 Y: 4.368.411,73
 X: 729.293,364 Y: 4.368.357,75

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

Digitised energy management, self-consumption, electric mobility and storage

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

About 500 m length of breakwater for wave energy converters

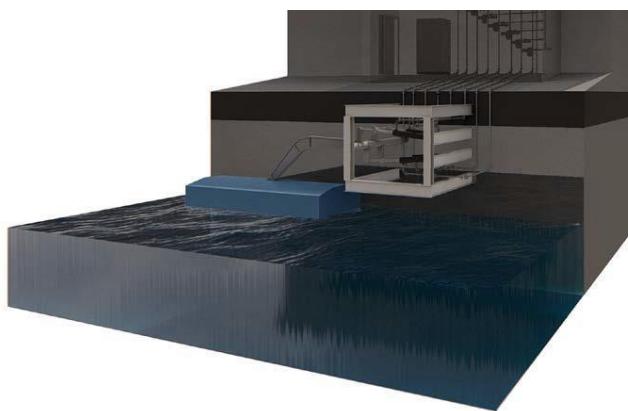

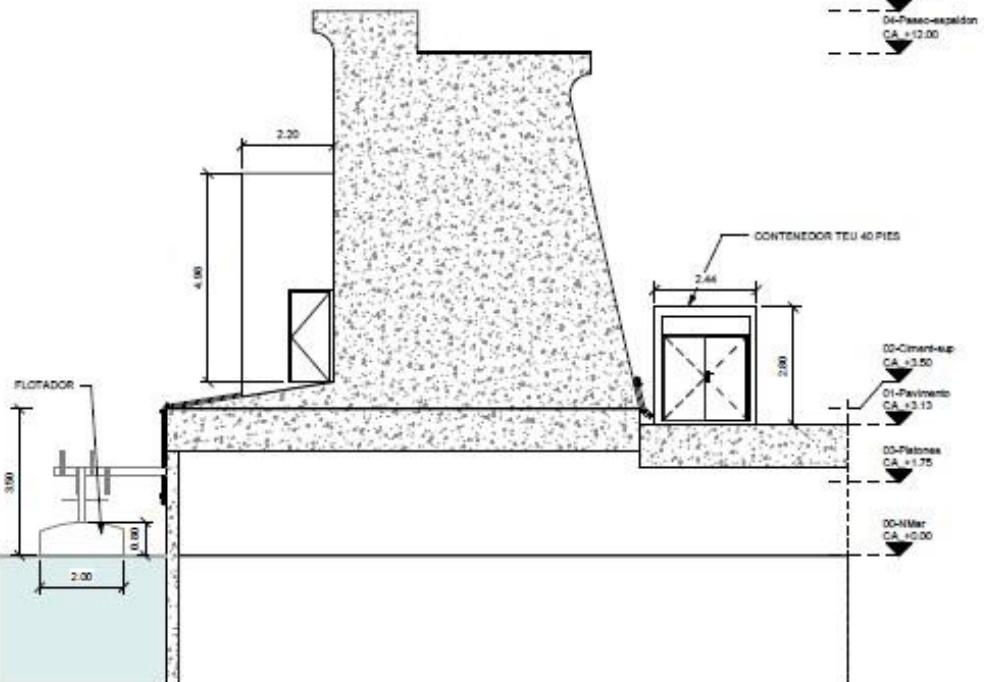

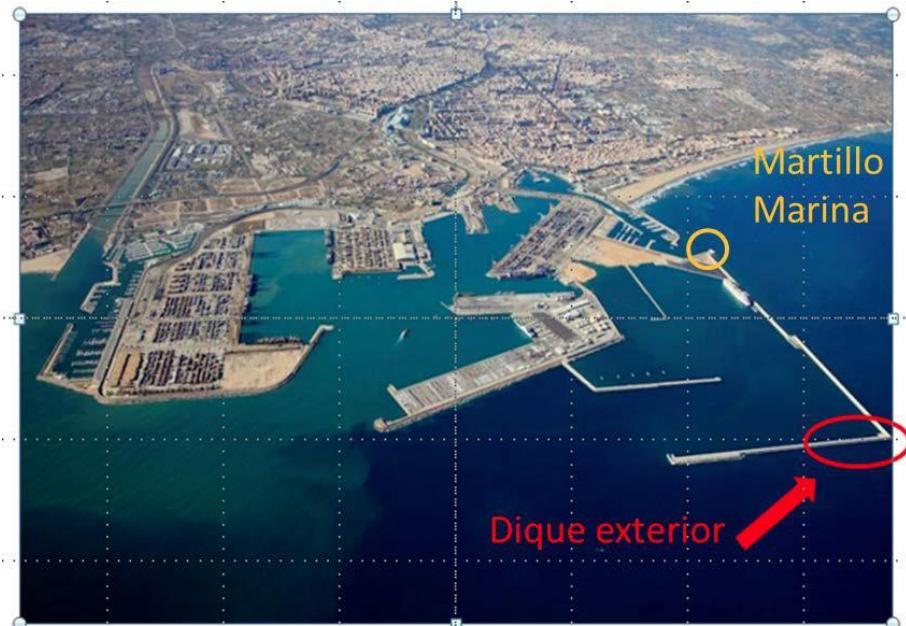

Wave energy:

Requirements for port deployment:

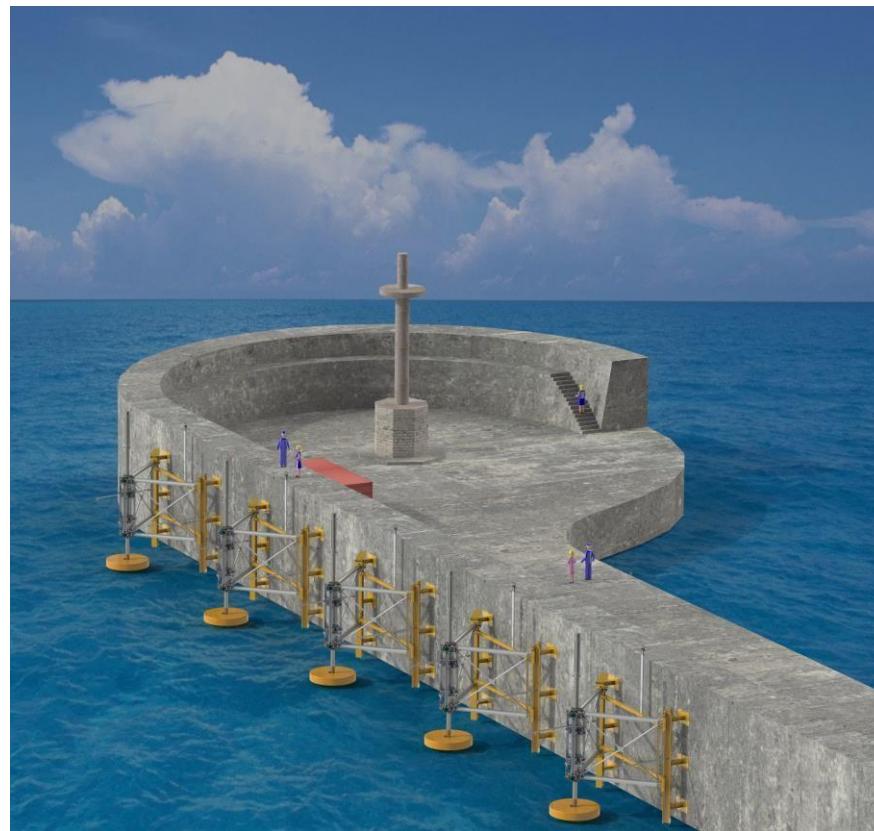

- ✓ Harmless to infrastructure
- ✓ Easy to fold in case of extreme weather events
- ✓ Fully accessible
- ✓ Low O+M costs
- ✓ Scalable

We have identified so far, at least three options for further research (all based on WAB technology)

Option 1

Option 2

Option 3

Decarbonisation strategy of the Port Authority of Valencia

1. Valenciaport in figures
2. Need for extra power supply
3. Pillars for the decarbonisation of the port
 1. Renewable Energies
 2. Use of alternative/clean fuels
 3. Energy efficiency
 4. Digitalisation
4. Other projects
5. Conclusions

Summary of projects to decarbonise the port of Valencia

Wind Power Plant
- 2024

New Container
Terminal ~ 2027

PV Plant 6 MWp
- 2022

New Passenger
Terminal - 2023

PV Plant 1.5 MWp
- 2021

New Electric Sub-
station - 2024

Thank you very much for your attention!!!!
